

Press Release

Jacksonville, Fl.

December 15, 2017

Swissray International Inc., is pleased to announce the installation of the first SR Pulse 710 1.5T wide-bore MRI system at Ackerman Cancer Center in Jacksonville Florida.

The SR Pulse 710 was chosen by Ackerman for several reasons. The 71cm internal bore is the widest on the market, making it easier to scan patients in treatment immobilization devices, improving patient care and treatment outcomes. Ackerman Cancer Center strives to offer cost-effective care, so the combination of technical features and affordability of the new 1.5T wide-bore MRI system also contributed to the decision. Scot Ackerman, M.D. stated "At Ackerman Cancer Center, we want to provide the most advanced and comfortable technology for our patients. The SR Pulse 710 allows us to do both – the openness of the bore reduces claustrophobia and the ability to perform DWI results in more accurate imaging so we can develop the best clinical plan to cure patients."

The sale of the SR Pulse 710 was executed in collaboration with Radiology Oncology Systems of San Diego, California, a Swissray distributor, who provides radiation oncology and diagnostic imaging facilities around the world with quality, cost-effective equipment. <https://www.oncologysystems.com>

About Swissray International, Inc.

For over twenty-five years Swissray has been recognized as the industry's pioneer in the design and manufacture of state-of-the-art Digital Radiography solutions used by radiography professionals and health care facilities around the globe. Swissray expanded its medical device offerings to include the Norland Bone Densitometer Product line in 2013. Swissray entered the MRI market in 2016 with the SR Pulse 710.
